

## Visibility & Customer Service

### Industrial Exhibition

present your range of services at the industrial exhibition. Secure your exhibition stand and give your forward-looking ideas new space

### Main Topics

- PVD – Basics, Components & Machine Building
- Coatings for Energy Technologies
- Coatings for Tools & Components
- Coatings for Bio-Medical Applications
- Coatings for Optics and Optical Components
- From Measured Value to Digital Twin
- Outside the Box – Creative Topics

### V Conference

The V Conference is the meeting place for the vacuum, plasma and coating industry.

Speakers and exhibitors from industry and academia present the latest developments and innovations in the industry to a knowledgeable audience.

Meet with Europe's community.

Discover the exhibiting companies. These leading companies offer new opportunities and innovative products to advance your projects.

The V Conference is Europe's largest platform for the exchange of business and science.

### V 2023 Programm

The V 2023 will address societal challenges such as climate protection and energy, sustainability, mobility and health, among others.

Rapid changes in the Earth's climate and increasingly important geopolitical considerations have led to an urgent need to introduce self sufficient sustainable energy technologies in Europe. Vacuum, plasma and coating technologies are important key technologies for this transformation and offer great opportunities.

### Exhibition & Networking

Time to meet, discuss and be creative

Exchange between industry and research

Presentation of products & services

- Industrial Exhibition & Industrial Evening
- V-Dinner | in ambient atmosphere
- EFDS Lightning – new format for short pitches
- Panel Discussion

### EFDS – Making knowledge work

EFDS is the European network of experts in surface and thin film technology for the future questions and solutions of innovative companies and research institutions.

The aim of EFDS is to motivate research and innovation through intensive exchange and cooperation between all stakeholders and to secure business value creation through forward looking ideas.

We support these driving factors for innovation and sustainable growth together with partners from business, science and politics.

*»Well organised conference, good scope, solid content in the presentations. For me, the conference and the accompanying exhibition generated a lot of ideas on how to grow my business and professional network. As always: great content, new and old experts and really good conversations.«*  
Rolf Schäfer (robeko)

### NEW – Tutorial at our partner SBS Metalltechnik GmbH Dresden

This tutorial offers you the unique opportunity to participate in the challenges of implementing customer requirements in a production tool.

Vacuum coating systems are high tech, from material selection and design to mechanical and electrical construction and process control.

Experts from the industry will give an insight into the specific aspects of all these complex topics such as development, construction, assembly and functional testing. The seminar will take place at the premises of SBS Metalltechnik GmbH Dresden, a global player in the field of large volume vacuum chambers.

### »Creative Talk – Outside the Box«

Think outside the box and get new ideas from outside. Opportunities and perspectives of thin film technology for quantum technologies.

How do we make the »quantum leap« transferring science to the economy and coupling inventiveness with entrepreneurship?
